## Questionnaire 1

- 1. What does HTTP stand for?
- A. HyperText Translation Protocol.
- B. HyperLink Transfer Protocol.
- C. HyperText Transfer Protocol.
- D. HyperLink Trace Program.
- 2. What is an overlay network?
- A. A telecommunications network which allows computers to exchange data.
- B. A computer network built on top of another network.
- C. A connection between one location and another.
- D. A connection point between two networks.

- 3. To establish a TCP connection between a server and a client, the server needs to:
- A. Create a socket.
- B. Create a socket and bind it.
- C. Create a socket, bind it and wait for a connection (listen).
- D. Create a socket, bind it, wait for a connection (listen) and read.
- 4. Application Layer protocol DOESN'T define:
- A. Message Syntax.
- B. Public domain protocols.
- C. Message Semantics.
- D. URLs.
- 5 What is a peer-to-peer (P2P) architecture?
- A. A distributed application architecture that partitions tasks or workloads between equal peers.
- B. A connection between peers owned by the service provider, passing through a dedicated server.
- C. Communication connection between two nodes or endpoints.
- D. A distributed application architecture that partitions tasks or workloads between a client and a server.
